SECTION 1

PRINCIPLES

1 The history of healthcare-associated infections and infection prevention and control in Australia

Professor Gwendolyn L. Gilbert

Introduction

Part A Precedents and Global Trends

1.1 19th century

1.2 20th century

Part B Pathogens

1.3 The dominant role of *Staphylococcus aureus*

1.4 Environmental and enteric bacteria

1.5 Blood-borne viruses (BBVs)

1.6 Epidemic/community viruses

Part C People and Programs

1.7 1960s—Surgeons, bacteriologists and early ICP appointments

1.8 1970s–90s—Hesitant beginnings and evolution of hospital IPC programs

Part D Policies and Practices

1.9 Segregating people who are (or may be) infectious

1.10 HAI surveillance—19th and early 20th century

1.11 Hand hygiene

Part E Conclusions—What has History Taught us About IPC in Australia?

1.12 Physical environment

1.13 Administration and governance

Coda

2 Contemporary infection prevention and control, and clinical infectious diseases in Australia

Professor Ramon Z. Shaban, Dr Catherine Viengkham, Dr Justin Beardsley and Dr Katherine Garnham

Introduction

2.1 Healthcare in Australia

2.2 The types, categories and prevalence of HAIs in Australia	33
2.3 Contemporary challenges and the burden of HAIs on populations and the Australian healthcare system	35
2.4 Clinical infectious diseases	37
Conclusion	48

3 Sciences of infection and disease

Associate Professor Maurizio Labbate and Dr Valery Combes

Introduction

3.1 Pathogenic microorganisms

3.2 Pathogenic biological particles

3.3 Multicellular parasites

3.4 Transmission of pathogens

3.5 Host–pathogen interactions

3.6 Immunological responses

3.7 Diagnosis of pathogens

3.8 Therapies for pathogens

4 Infection prevention and control programs and plans

Professor Ramon Z. Shaban, Dr Deborah Macbeth and Dr Catherine Viengkham

Introduction

4.1 Infection prevention, control and management

4.2 Commonwealth IPC programs and plans

4.3 State and territory IPC programs and plans

4.4 Developing an infection control management plan

4.5 Challenges for infection prevention and control (IPC) programs

Conclusion

5 The role of the infection control professional

Dr Deborah Macbeth and Professor Ramon Z. Shaban

Introduction

5.1 The healthcare context

5.2 Surveillance

5.3 Education

5.4 Consultation

5.5 Governance

5.6 Staff health

5.7 Planning and professionalism

5.8 Knowledge generation

Conclusion

6 Governance, accreditation and standards in infection prevention and control	117	9.5 Contemporary challenges for public health and IPC in Australia	179
<i>Professor Ramon Z. Shaban, Dr Deborah Macbeth and Dr Catherine Viengkham</i>		Conclusion	182
Introduction	118	10 Epidemiology and surveillance	185
6.1 Defining clinical governance	118	<i>Professor Philip L. Russo</i>	
6.2 Roles in clinical governance	119	Introduction	186
6.3 Accreditation	123	10.1 Epidemiology	186
6.4 Infection prevention and control standards	127	10.2 Surveillance	191
Conclusion	128	Conclusion	202
7 Risk assessment and management in infection prevention and control	134	11 Outbreak management	206
<i>Dr Deborah Macbeth and Professor Dale Dominey-Howes</i>		<i>Professor Ramon Z. Shaban, Dr Deborah Macbeth and Dr Catherine Viengkham</i>	
Introduction	135	Introduction	207
7.1 The healthcare context	136	11.1 The history of outbreaks in Australia	207
7.2 Governance	138	11.2 Outbreak management in Australia—government and health sector response frameworks	209
7.3 A structured and comprehensive approach	141	11.3 Outbreak management in Australia—broad strategies	214
7.4 Risk assessment	145	11.4 Outbreak management in and for healthcare settings	215
7.5 Risk identification	146	11.5 Outbreak investigation	217
7.6 Risk mitigation	148	11.6 Challenges in outbreak management in Australia	221
7.7 Monitoring and reviewing	149	Conclusion	221
7.8 Recording and reporting risks	150	12 Research in infection prevention and control	225
Conclusion	151	<i>Professor Ramon Z. Shaban, Dr Deborah Macbeth, Professor Brett G. Mitchell, Professor Philip L. Russo, Dr Catherine Viengkham</i>	
8 Infection prevention and control for One Health	153	Introduction	226
<i>Professor Dale Dominey-Howes and Associate Professor Maurizio Labbate</i>		12.1 Background and context of infection prevention and control research	226
Introduction	154	12.2 Solving problems in infection prevention and control	227
8.1 One Health: its origins and importance to infection prevention and control	154	12.3 Research designs	230
8.2 One Health: a concept by another name	156	12.4 Research ethics	239
8.3 Challenges or critiques of One Health	157	12.5 Outbreak investigation	241
8.4 Factors within One Health driving infectious disease outbreaks	157	Conclusion	243
Conclusion	160	SECTION 2	
9 Public health and infection prevention and control	162	PRACTICE	
<i>Dr Catherine Viengkham, Dr Benjamin Silberberg, Dr Shopna Bag, Associate Professor Stephen Corbett, Penelope Clark and Professor Ramon Z. Shaban</i>		13 Standard precautions	247
Introduction	163	<i>Dr Peta-Anne Zimmerman and Debra Lee</i>	
9.1 Defining public health	163	Introduction	248
9.2 A brief history of public health: from Europe to Australia	163	13.1 Standard precautions overview	248
9.3 Public health infrastructure in Australia	164	13.2 Hand hygiene	250
9.4 Intersections of public health and infection prevention and control	166	13.3 Respiratory hygiene and cough etiquette	253
		13.4 Selection and use of personal protective equipment (PPE)	253
		13.5 Maintaining a safe environment	255

13.6 Cleaning	258	16.11 Inspection and maintenance	336
13.7 Environmental cleaning	260	16.12 Packaging	337
13.8 Asepsis overview	263	16.13 Sterilisation	338
13.9 Healthcare worker and employer responsibilities for standard precautions	265	16.14 Storage and transportation of processed RMDs	342
13.10 Implementation of standard precautions	267	16.15 Quality assurance and quality control in medical device processing	343
Conclusion	268	16.16 Criteria for release of processed RMDs	346
14 Transmission-based precautions	270	16.17 Traceability	346
<i>Dr Lynette Bowen and Prof Martin Kiernan</i>		Conclusion	347
Introduction	271	17 Urinary tract infections	351
14.1 Historical segregation practices	271	<i>Professor Brett G. Mitchell</i>	
14.2 Transmission of infection	271	Introduction	352
14.3 Overview of transmission-based precautions	271	17.1 Epidemiology of urinary tract infections	352
14.4 Specific transmission-based precautions	273	17.2 What are urinary tract infections?	352
14.5 Personal protective equipment	280	17.3 Diagnostic methods for UTI	353
14.6 A shifting paradigm	287	17.4 UTI treatment, prevention and antimicrobial resistance (AMR)	354
14.7 Other considerations	288	17.5 Classifications and definitions of UTIs by geographical location	355
Conclusion	290	17.6 Catheter-associated UTI (CAUTI)	356
15 Environmental cleaning	294	17.7 Quality improvement programs	359
<i>Martin Kiernan</i>		Conclusion	359
Introduction	295	18 Surgical site infections	363
15.1 Evidence that the environment poses a risk of transmission	295	<i>Professor Ramon Z. Shaban, Dr Deborah Macbeth, Paul Simpson, Dr Catherine Viengkham and Dr Christine Roder</i>	
15.2 Key considerations for a cleaning program	296	Introduction	364
15.3 Assessment of level of risk for cleaning and decontamination	297	18.1 Definitions of surgical site infections	364
15.4 Cleaning/decontamination principles and procedures	297	18.2 Epidemiology and burden of surgical site infections	366
15.5 Single use equipment	303	18.3 Aetiology of surgical site infections	370
15.6 Supporting a safer environment through cleaning and decontamination	303	18.4 Risk factors for surgical site infections	373
15.7 Assessing the effectiveness of environmental cleaning	308	18.5 Infection prevention and control interventions	375
15.8 Feedback of the results of environmental monitoring	311	Conclusion	379
Conclusion	312	19 Pneumonia and other respiratory infections	382
16 Disinfection and sterilisation	316	<i>Dr Oyebola Fasugba and Associate Professor Andrew Stewardson</i>	
<i>Terry McAuley and Dr Gerald McDonnell</i>		Introduction	383
Introduction	317	19.1 Epidemiology	383
16.1 The Australian regulatory framework for medical devices, sterilants and disinfectants	317	19.2 Surveillance of NV-HAP	385
16.2 The relationship between Australian and international standards	319	19.3 Prevention and control of NV-HAP	386
16.3 The Spaulding Classification	319	19.4 Influenza	389
16.4 Processing environments	322	19.5 Respiratory syncytial virus (RSV)	389
16.5 Point of care processing	325	19.6 Coronavirus (COVID-19)	390
16.6 Water quality	326	Conclusion	390
16.7 Steps in processing of reusable medical devices	329	20 Bloodstream infections	393
16.8 Point of use pre-treatment	329	<i>Dr Patricia E. Ferguson and Kathy Dempsey</i>	
16.9 Cleaning	330	Introduction	394
16.10 Drying RMDs and endoscopes	335	20.1 Definitions	394
		20.2 Staphylococcus aureus bloodstream infections (SABSIs)	396

20.3 Device-related infections	398	24.6 General considerations	487
20.4 Prevention methods— HA-SABSI	400	24.7 Patient accommodation: room classes	488
20.5 Prevention of other healthcare-associated infections	407	24.8 Heating, ventilation, air conditioning and water systems	490
20.6 Investigation, surveillance and governance	408	Conclusion	492
Conclusion	410		
21 Gastrointestinal infections	413	25 Blood-borne viruses	495
<i>Dr Chong Wei Ong</i>		<i>Dr Myong Gyu Kim, Associate Professor Mark W. Douglas and Dr Susan Maddocks</i>	
Introduction	414	Introduction	496
21.1 Clostridioides difficile	414	25.1 Characteristics of blood-borne viruses	496
21.2 Noroviruses	424	25.2 Transmission of BBVs in the healthcare setting	498
21.3 Rotavirus	433	25.3 Preventing transmission of BBVs in the healthcare setting	498
Conclusion	434	25.4 Managing BBV exposures in the healthcare setting	499
22 Significant and multiresistant organism infections, and antimicrobial resistance	445	25.5 HCWs living with a BBV	504
<i>Dr James Wolfe, Dr Sanchia Warren and Dr Louise Cooley</i>		25.6 Other viruses with the potential for blood-borne transmission	506
Introduction	446	25.7 Screening of blood donors for BBVs	506
22.1 Staphylococcus aureus	446	Conclusion	506
22.2 Enterococcus	448		
22.3 Enterobacterales	449	26 Infection prevention and control for staff health and occupational exposure	509
22.4 Acinetobacter spp.	451	<i>Dr Deborah Macbeth and Dr John Gerrard</i>	
22.5 Pseudomonas aeruginosa	453	Introduction	510
22.6 Burkholderia cepacia	454	26.1 Vaccine-preventable diseases and pre-employment screening	511
22.7 Stenotrophomonas maltophilia	455	26.2 Occupational exposure to blood and body fluids	514
22.8 Mycobacterium tuberculosis	456	Conclusion	518
22.9 Candida auris	456		
Conclusion	458	27 Infection prevention and control in emergency care settings	520
23 High consequence infectious diseases and biocontainment for health protection	460	<i>Professor Ramon Z. Shaban, Dr Shizar Nahidi and Dr Catherine Viengkham</i>	
<i>Professor Ramon Z. Shaban, Dr Matthew V. N. O'Sullivan, Dr Cecilia Z. Li and Dr Catherine Viengkham</i>		Introduction	521
Introduction	461	27.1 Characteristics and contexts of emergency care in Australia	521
23.1 International definitions of HCIDs	461	27.2 Healthcare-associated infections and infectious diseases in emergency care	527
23.2 Defining HCIDs in Australia	462	27.3 Infection prevention and control in emergency care	529
23.3 Australian experience of HCIDs	466	27.4 Specific infection prevention and disease control challenges in emergency care	534
23.4 Risk to healthcare workers	467		
23.5 Designated biocontainment facilities for HCIDs	468	28 Infection prevention and control in intensive and critical care settings	546
Conclusion	475	<i>Professor Thea van de Mortel and Dr Peta-Anne Zimmerman</i>	
24 Construction, redevelopment and the built environment	478	Introduction	547
<i>Dr Deborah Macbeth</i>		28.1 Characteristics and contexts of intensive and critical care settings in Australia and New Zealand	547
Introduction	479		
24.1 Environmental risks	479		
24.2 Managing risk: the hierarchy of control	480		
24.3 A structured approach	480		
24.4 Infection control by design	483		
24.5 New build versus renovation	484		

28.2 HAI risks associated with critical care settings in Australia and New Zealand	550	32.2 Containment measure types	626
28.3 Prevention and control of HAI in critical care settings	552	32.3 Common laboratory-acquired infections	629
28.4 Novel respiratory infections: a new threat	558	32.4 Bacterial LAIs	630
Conclusion	558	32.5 Viral LAIs	633
		32.6 Other LAIs	634
		32.7 IPC in laboratory settings	635
		Conclusion	637
29 Infection prevention and control in residential aged care settings	561	33 Infection prevention and control in operating theatre and endoscopy practice	639
<i>Associate Professor Noleen Bennett and Lyn-li Lim</i>		<i>Paul Simpson, Dr Christine Roder and Professor Eugene Athan</i>	
Introduction	562	Introduction	640
29.1 Characteristics of Australian residential aged care facilities	562	33.1 Historical infection control and surgery	640
29.2 Residential aged care residents and infections	565	33.2 Mitigating the risk of infection	640
29.3 Infection prevention and control organisational support and work practices	567	33.3 A care bundle approach to infection	647
Conclusion	573	33.4 Perioperative surgical and procedural team IPC responsibilities	648
		33.5 Surgical and endoscopy unit design	653
		Conclusion	655
30 Infection prevention and control in oncology and immunocompromised patient settings	577	34 Infection prevention and control in dentistry practice	660
<i>Dr Priya Garg and Dr Nicole Gilroy</i>		<i>Dr Roslyn Franklin, Dr Herdeza Verzosa and Dr Tony Skapetis</i>	
Introduction	578	Introduction	661
30.1 Characteristics and contexts of oncology and the immunocompromised in Australia	578	34.1 Dentistry and dental practice settings	661
30.2 Healthcare-associated infection risks associated with care in oncology and the immunocompromised in Australia	585	34.2 HAIs and modes of transmission in the dental practice setting	666
30.3 Prevention and control of HAIs associated with care in oncology and the immunocompromised in Australia	591	34.3 Prevention and control of HAIs in the dental practice setting	670
30.4 Infection control—healthcare setting	594	34.4 IPC programs and education in dentistry	678
Conclusion	597	Conclusion	680
31 Infection prevention and control in mental health and psychiatric practice settings	602	35 Infection prevention and control in allied health settings—physiotherapy, speech pathology, podiatry and rehabilitation	684
<i>Dr Shizar Nahidi and Dr Catherine Viengkham</i>		<i>Dr Susan Coulson, Dr Tiffany Dwyer, Dr Emma Charters, Dr Fiona Hawke and Belinda C. Henderson</i>	
Introduction	603	Introduction	685
31.1 Overview of mental health services in Australia	603	35.1 Physiotherapy	686
31.2 Infectious diseases and HAIs in mental health and psychiatric practice settings	611	35.2 Speech pathology	689
31.3 IPC in mental health settings in Australia	616	35.3 Podiatry	694
Conclusion	621	35.4 Rehabilitation units	695
		Conclusion	695
32 Infection prevention and control in medical, veterinary and scientific laboratory settings	625	36 Infection prevention and control in Aboriginal and Torres Strait Islander Health	698
<i>Dr Roselle Robosa, Dr David H. Mitchell, Dr Cecilia Li, Professor Sharon C.A. Chen and Dr Matthew V.N. O'Sullivan</i>		<i>Dr Vanessa Sparke and Margaret Wymarra</i>	
Introduction	626	Introduction	699
32.1 Principles of laboratory biocontainment	626	36.1 Influencing factors for health and illness in Aboriginal and Torres Strait Islander peoples	699

36.2 Infection prevention and control for Aboriginal and Torres Strait Islander health	706	40 Infection prevention and control in veterinary practice	772
36.3 Communicating the message differently—caring for Aboriginal and Torres Strait Islander people within the IPC context	710	<i>Associate Professor Jane Heller, Dr Cristina Sotomayor-Castillo and Professor Jacqueline Norris</i>	
Conclusion	711	Introduction	773
37 Infection prevention and control in home and community health settings	715	40.1 Setting the scene: characteristics and context of veterinary practice in Australia	773
<i>Gareth Hockey and Professor Sue Randall</i>		40.2 HAI risks in veterinary practice settings in Australia	774
Introduction	716	40.3 IPC in veterinary practice	778
37.1 Characteristics and contexts of home and community health settings in Australia	716	Conclusion	780
37.2 Prevention and control of HAIs in home and community health settings in Australia	717	41 Infection prevention and control in pharmacy practice and antimicrobial stewardship	784
37.3 HAI risks associated with home and community health settings in Australia	719	<i>Associate Professor Gary Dean Grant and Tejaswini Kalkundri</i>	
37.4 Strategies for infection prevention in patient homes	720	Introduction	785
37.5 Sterile stock and shared equipment in the community health and home setting	723	41.1 IPC in pharmacy practice	788
37.6 Patient knowledge and education	726	41.2 AMS and the role of the pharmacist	791
Conclusion	727	Conclusion	795
38 Infection prevention and control in radiology and diagnostic imaging practice settings	729	42 Infection prevention and control in maternity settings	800
<i>Dr Jocelyne M Basseal</i>		<i>Dr Lyndall J. Mollart and Rachel Newell</i>	
Introduction	730	Introduction	801
38.1 Ultrasound	730	42.1 Characteristics and contexts of maternity care (midwifery/obstetric practice)	801
38.2 Interventional radiology	736	42.2 Mode of infection transmission in the perinatal period	802
38.3 Medical imaging during an outbreak	737	42.3 Blood-borne pathogens (BBPs)	804
38.4 Discussion	739	42.4 Common pathogens in the perinatal period and HAIs	806
Conclusion	739	42.5 Maternity-specific site infections	813
39 Infection prevention and control in correctional health practice	743	42.6 Homebirth—use of reusable equipment/cleaning practices	817
<i>Cathi Montague, Christine Fuller and Sylvia Gandossi</i>		Conclusion	818
Introduction	744	43 Infection prevention and control in neonatal and paediatric health	823
39.1 Overview of custodial governance in Australia	744	<i>Professor Ramon Z. Shaban, Dr Deborah Macbeth, Professor Donna Waters and Dr Catherine Viengkham</i>	
39.2 The justice system custodial population in Australia	745	Introduction	824
39.3 Correctional context challenges	746	43.1 Characteristics of infants, children and young people in Australia	824
39.4 The built environment considerations for IPC	749	43.2 Features and settings of neonatal and paediatric healthcare	825
39.5 Correctional health staffing	753	43.3 Epidemiology of HAIs in neonatal and paediatric populations	827
39.6 Health information sharing	754	43.4 HAI risks in neonatal and paediatric health	829
39.7 Common IPC issues in correctional healthcare	754		
39.8 Contact transmissible diseases	755		
39.9 Correctional IPC governance	759		
Conclusion	762		

43.5 Types of HAIs	834		
43.6 Specific IPC practices for neonatal and paediatric health	836		
Conclusion	840		
44 Infection prevention and control in primary healthcare settings	844		
<i>Karen Booth</i>			
Introduction	845		
44.1 Clinical governance	846		
44.2 The role of the IPC coordinator	846		
44.3 Staff induction and training	847		
44.4 Triage and waiting room management	849		
44.5 Immunisation and vaccine potency	851		
44.6 Reprocessing of reusable instruments in small office-based settings	852		
44.7 Antimicrobial resistance and primary care	853		
Conclusion	854		
		45 Infection prevention and control in cosmetic, tattooing, piercing and personal appearance practice and settings	856
		<i>Dr Catherine Viengkham, Dr Deborah Macbeth and Professor Ramon Z. Shaban</i>	
		Introduction	857
		45.1 Infection prevention and control in cosmetic, tattooing, piercing and personal appearance practice and settings	857
		45.2 HAI risks in cosmetic, tattooing, piercing and personal service settings	861
		45.3 IPC in cosmetic, tattooing, piercing and personal service settings	866
		Conclusion	869
		Index	873

HEALTHCARE-ASSOCIATED INFECTIONS IN AUSTRALIA

Principles and Practice of Infection Prevention and Control

Improving safety and quality in healthcare across the entire multidisciplinary team

Infection prevention and control (IPC) is everybody's responsibility. *Healthcare-associated Infections in Australia* is the first Australian text to address the challenges posed by infectious diseases and healthcare-associated infections (HAIs) for all members of the multidisciplinary healthcare team.

Drawing on the expertise of a wide author team, and based on current research, this important and comprehensive text provides a clear pathway for the reader to increase their knowledge and understanding of IPC. The text is designed for both students and practising clinicians, and is presented in two sections – Principles and Practice – for ease of use.

With IPC principles and guidelines now embedded into all health-related curricula, and mandated by standards and guidelines across all areas of healthcare, this is a book no health professional should miss.

KEY FEATURES

- Includes practice tips, case studies and video-based learning materials providing real-life examples across more than 20 health professions
- Suitable for increasing IPC knowledge across all members of the multidisciplinary team. Content is pitched at different levels, with examples ranging from novice to expert
- Aligned to the Australian National Infection Control Guidelines 2019 and the NSQHS Standard *Preventing and Controlling Healthcare Associated Infections*, as well as the nine hospital-acquired complication (HAC) HAIs addressed in specific chapters
- Endorsed by the Australian College for Infection Prevention and Control (ACIPC) and the Australian Society for Infectious Diseases (ASID)
- Supported by a companion text, *Epidemiology of Healthcare-associated Infections in Australia*, providing data on the epidemiology of healthcare-associated surveillance in Australia
